

PetroQuip TTU Bridge Plug

The **PetroQuip TTU Retrievable Bridge Plug** is a high-pressure packer-style bridge plug used for multiple selective zone treating and testing operations. The setting mechanism is compatible with the PetroQuip 1X packer for one trip multi-set plug-and-packer operations. The TTU Retrievable Bridge Plug will set in tension or compression, making it ideal for shallow applications such as wellhead testing, as well as for deep, high-pressure applications such as fracture stimulation. The large internal by-pass prevents swabbing when running and retrieving. The internal by-pass opens prior to releasing the upper slips to equalize pressure.

Features and Benefits

- Quarter turn set and release
- May be set multiple times
- May hang gauges below plug for testing operations

General Applications

- Temporary zonal isolation
- Shallow set to test wellhead
- Deep high pressure testing
- Squeeze cementing
- Fracturing
- Selective zone treating and testing operations
